### Measuring the Client

You will need to take two measurements to find the most suitable sling size for your client; height and girth. See guidance below whilst referring to the diagram and table above for assistance.

#### 1. Height

Take your client's full height as shown. It may prove more accurate to measure height from a recumbent (lying) position.

#### 2. Girth

For female clients, measure around the hips. For male clients and children, measure around the chest just under the arms.

### MultiFit SL

This MultiFit SL incorporates over-sized leg supports to specifically cater for clients with larger than average hips/thighs. Should you find a client's girth size is too large to match the height in the table above, try these for comparison.

**PLEASE NOTE:** The above information is for guidance only. Highgate Healthcare strongly recommends a thorough risk assessment takes prior to lifting/transferring and client to ensure their complete safety, comfort and dignity at all times.
